

# Why is the BWS doing a Condition Assessment?

By physically assessing the condition of our infrastructure, we can make decisions based on current technical data and actual field conditions.

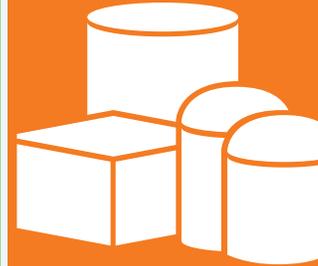

## What major infrastructure is assessed?

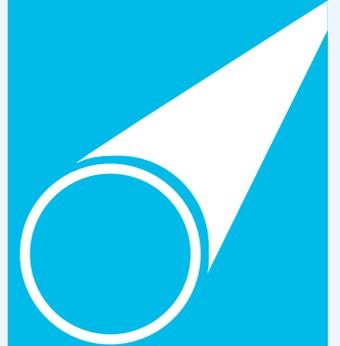

Reservoirs

Pump Stations  
and Wells

Water Treatment  
Facilities

Pipelines

## What are the benefits?

- Provide hard data to determine where to best spend funds on proactive restoration or replacement.
- Collect data for the Water Master Plan, which will result in 30-year roadmap of infrastructure improvements.
- Identify improvements to design, operations, and maintenance standards so that infrastructure operates more efficiently and lasts longer.
