

Don't Say No To H2O

Pure water has no substitute
We must not waste it, that is absolute
Water is the Earth's natural resource
If we don't conserve it, we will feel remorse
It keeps us hydrated, it keeps us healthy
Yet it is slipping away, slow and stealthy
Just like food, water supports life
If we keep wasting it, we will go through strife
To start saving it, you can do small things like
stopping leaks
However, this is just one way, there are
several more techniques
We must do our best to try and conserve
So that future generations, we can preserve
Saving water should be as exciting as going to prom
